

Welcome to Science Lab!

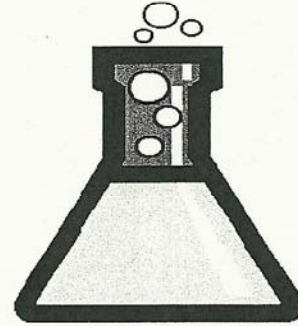

We are excited about what the year holds in our new science class. We feel this class will only enrich your child's experience at First Baptist Simpsonville. We look forward to learning together as our journey begins. Our main goal is to provide a hands on learning environment for your child.

This year in Science lab, your child will explore many wonderful things. We will study the following:

Animals, Insects, Food Groups, Nutrition, Solar System, Weather, the Five Senses, Seasons and more!

Our hope is that these topics will inspire your child to learn, to love, and explore nature. The class is held in 30 minute periods. Your child will attend Science Lab once a week. Please check with your child's teacher to receive his or her class time.

Please look for a summary sheet located in your child's folder each week. This weekly letter will keep you up to date with what your child learned during the week. It will also include ideas and book suggestions that you can use at home to help reinforce the lesson which was just taught. I encourage you to take advantage of the information available on the weekly letter since there is a limited time each week to explore different concepts.

We encourage your child to share nature items that they find with the classroom. Please enclose the item in a Ziplock bag. We will share items as time permits in the classroom and will post them on our Discovery wall. Items may not be returned, so please take this into consideration as you select items to bring in.

Through out the year I may find the need for different supplies that can be found around the house. I will be including requests for items such as paper towel rolls or milk jugs throughout the year. Please be on the look out for such request which will be posted on the weekly letter.

Please feel free to call me anytime during the school year with any questions or concerns.

Sincerely,

Johanna Lewis
